

# PROCOATINGS

---

Strength you see, trust you feel.

# ABOUT US

Pro Coatings delivers specialized waterproofing, epoxy, and industrial protective coatings across diverse sectors including automotive, pharmaceuticals, biotechnology, chemical plants, car manufacturing, warehouses, airplane hangars, hospitals, electronics, engineering, food industries, dairies, hotels, restaurants, and laboratories.

Backed by a team of highly qualified professionals, we combine advanced technology, high-grade materials, and efficient methodologies to ensure long-lasting, environment-friendly, and energy-efficient solutions.

Our commitment to quality, precision, and reliability has earned us the trust of leading clients nationwide, establishing Pro Coatings as a trusted partner for industrial, commercial, and residential applications.

# INDUSTRIAL WATERPROOFING

Industrial structures are constantly exposed to moisture, chemical spills, temperature variations, and environmental stress, making waterproofing essential for durability and safety. Our industrial waterproofing solutions are designed to protect critical areas such as basements, roofs, water tanks, expansion joints, and foundations from water ingress and damage.

At Pro Coatings, we use advanced waterproofing

systems and high-performance materials that not only prevent leaks but also enhance the structural integrity of your facility. Our solutions are long-lasting, cost-effective, and tailored to meet the demanding needs of industries like manufacturing, pharmaceuticals, food processing, engineering, and more.

With expert application and strict quality control, we ensure maximum protection, minimal downtime, and extended life of your assets.

### Cementitious Waterproofing

Easy to apply, mostly used in internal areas like bathrooms, kitchens, and water tanks

### Crystalline Waterproofing

Penetrates concrete to block water pathways; excellent for basements, tunnels, and foundations.

### Bituminous Coating (Asphalt Coating)

Protective coating against water and vapor; commonly used for concrete foundations

## Types of Waterproofing

# Types of waterproofing

## Liquid Waterproofing Membrane

A flexible, seamless coating applied using a roller, brush, or spray. Ideal for roof slabs, terraces, podiums, and balconies, it provides excellent crack-bridging and UV resistance. Available in Acrylic, Polyurethane, and Polyurea systems, these membranes are designed to deliver durability, elasticity, and long-lasting protection even under harsh weather conditions.

# INDUSTRIAL FLOORING

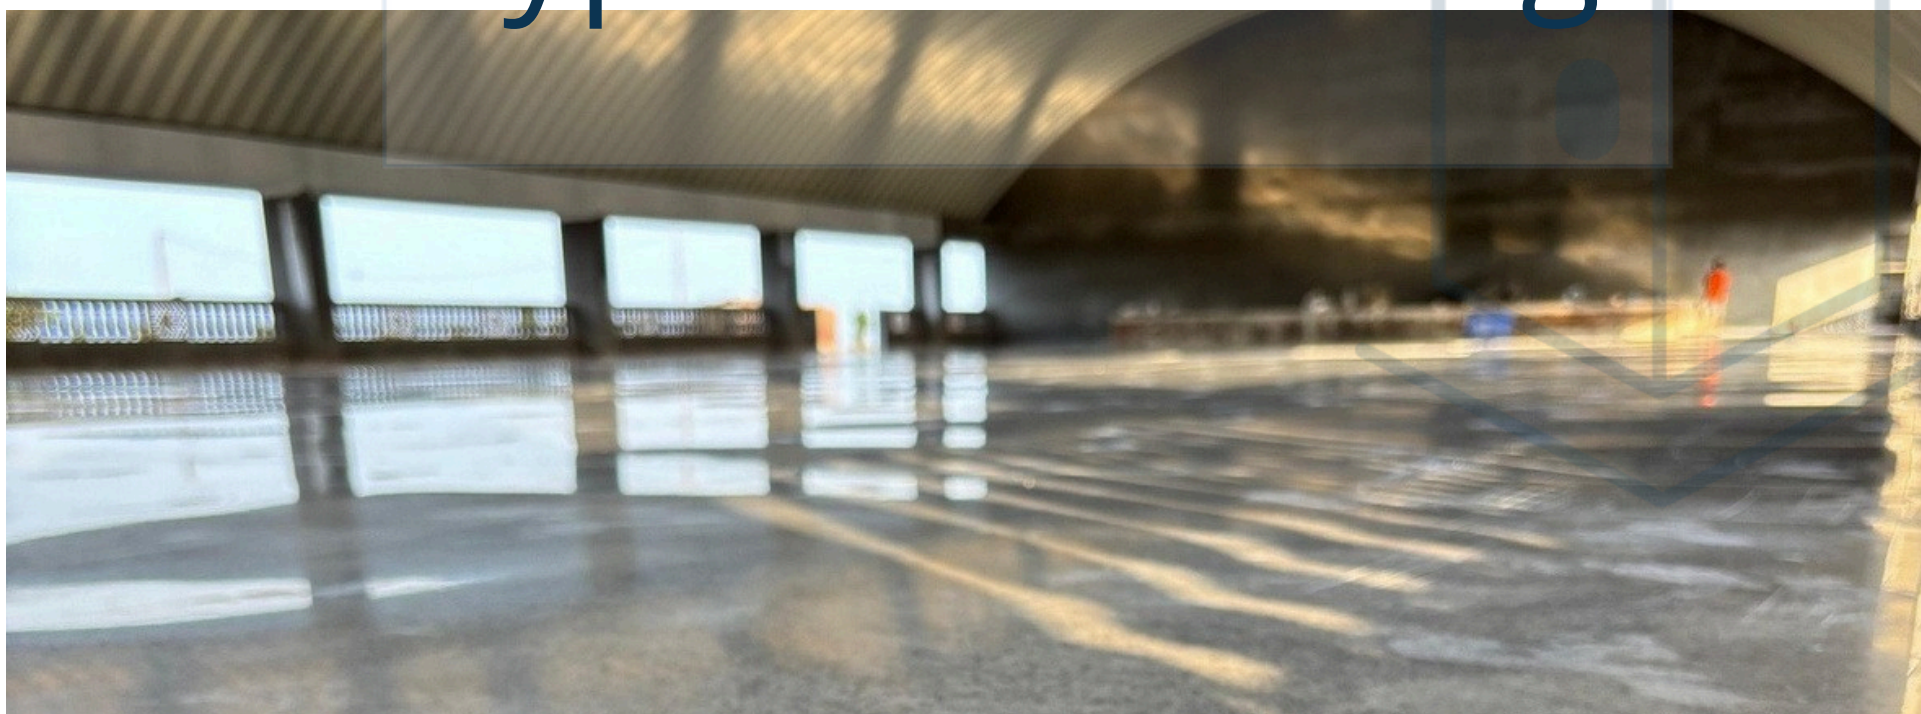

Industrial floors endure heavy loads, high traffic, chemical exposure, and constant wear—making durability and performance critical. At Pro Coatings, we provide specialized industrial flooring solutions that combine strength, safety, and longevity.

Our flooring systems include epoxy, polyurethane, anti-static, and heavy-duty coatings, designed to withstand mechanical stress, resist chemicals, and ensure dust-free, hygienic surfaces. These solutions are ideal for manufacturing units, warehouses, pharmaceutical plants, food industries, hospitals, automobile workshops, and engineering facilities.

With advanced application techniques and high-grade materials, we deliver floors that are not only aesthetically clean and seamless but also low-maintenance, safe, and compliant with industry standards.

# Types of Flooring

## Floor Densification and polishing

Floor Densification is a chemical treatment that penetrates concrete pores, reacting with free lime to form a harder, denser matrix.

It significantly improves compressive strength, abrasion resistance, and surface durability.

The process eliminates dusting, porosity, floor

and micro-cracks, enhancing performance under heavy loads.

Ideal for industrial floors, warehouses, and production facilities requiring long service

# Types of Flooring

Epoxy Flooring

PU Flooring

Seamless, chemical-resistant, hygienic.  
Ideal for pharmaceuticals, food industries, hospitals, and electronics.

Flexible, abrasion and chemical-resistant.  
Suitable for automobile, engineering, and heavy traffic areas.

# Types of Flooring

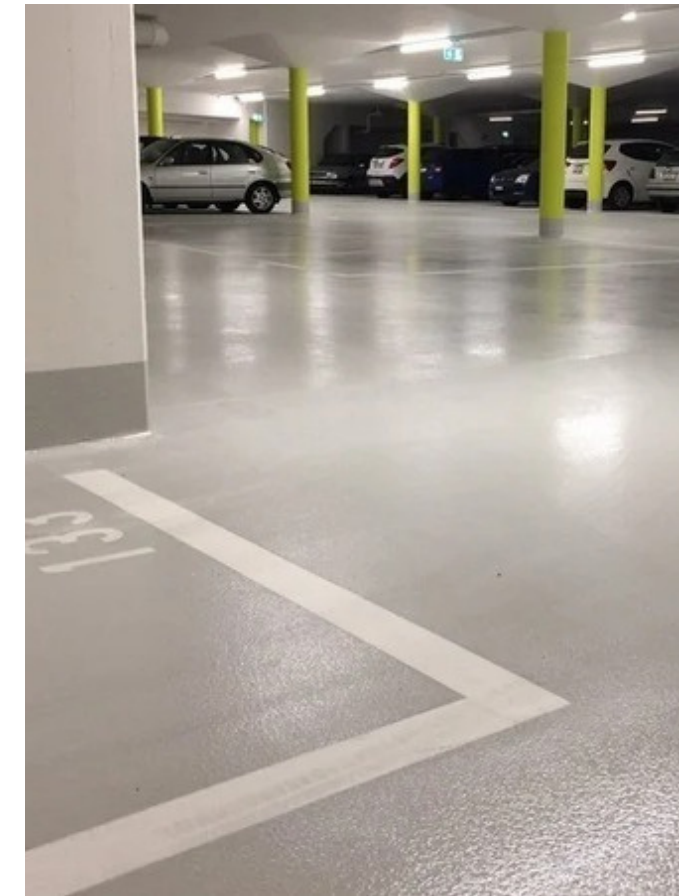

**ESD / Anti-Static Flooring**

Prevents electrostatic discharge. Used in electronics, data centers, and clean rooms.

**Electric Insulation**

Off-site prefabrication of parts enables faster assembly and reduces on-site resource consumption.

**Car Deck Parking**

UV-resistant, skid-proof, weather-protective coatings. Designed for basements, multi-level car parks, and driveways.
